

Instant Payments Implementation Guidelines for ISO 20022 Interbank Messages

SIC IP Service

IP Emergency Limit System Manager (camt.011)

Version 1.1, valid from 21 November 2025

Revision history

All the changes carried out in this document are listed below with the version designation, the change date, a brief description of the change and the specification of the chapters affected.

Version	Date	Description of the change	Chapter
1.1	28.02.2025	Modifications per SIC Platform Release 5.2	
		Former chapter 3.1 "Message flow" removed (editorial adjustment without functional impact to align with other module documents, see "SIC IP Service Handbook" for illustrations of message flows)	
		New chapter "Further business specifications" (editorial adjustment without functional impact)	3.5
		Modifications of "Technical specifications": New reference to the base document for "ISODateTime" for the following element (editorial adjustment in order to align with RTGS module documents and to avoid redundant information, no functional change in the SIC IP service): <ul style="list-style-type: none"> .../MsgHdr/CreDtTm 	4.1
1.0	20.10.2022	First edition	All

1 Introduction

1.1 Overview of the documentation structure

The Implementation Guidelines consist of a base document with general information concerning all message types, and various module documents – this document is for the message type "camt.011" – with message-specific information, including information on the application-specific handling of individual elements. They specify the messages to be submitted to and delivered from the SIC IP service using the ISO 20022 message standard.

1.2 Target audience

This Implementation Guideline is intended for use exclusively by the System Manager of the SIC IP service.

1.3 Change control

All modifications made to this document are listed in the change history showing the version, the date of the change, a brief description and references to the chapters concerned.

1.4 XML schema

The XML schema for "camt.011" is published on the www.iso-payments.ch website:

- ***camt.011.001.07.ch.01.xsd***

It should preferably be opened using specialized XML software.

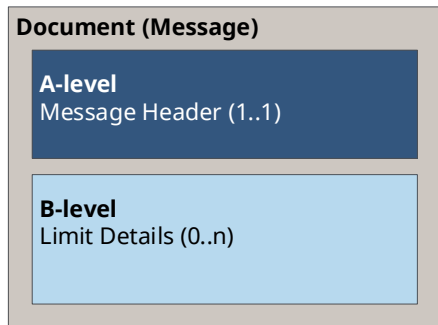

1.5 Reference documents

Additional information on the Implementation Guidelines can be found in the reference documents listed in the base document.

2 ISO definitions

The "Modify Limit" message (camt.011) is sent by the System Manager to the SIC IP service to set an amount limit for IP customer payments in the SIC IP service (in emergencies).

The "Modify Limit" message is based on the ISO 20022 XML schema "camt.011.001.07".

The "camt.011" message is essentially structured as follows:

- **A-level:** Message level, "*Message Header*" element. This block is mandatory and must occur exactly once in the SIC IP service.
- **B-level:** Limit level, "*Limit Details*" element. This block can occur n times in the ISO definition. In the SIC IP service, this block is mandatory and allowed only once.

Figure 1: Basic message structure of the "camt.011" message

3 Business specifications

3.1 Use case

The "Modify Limit" message is used by the System Manager in the following use case in the SIC IP service:

Use case	Input/Output	ISO 20022
IP emergency limit System Manager	I	camt.011

Table 2: Use case for the ISO 20022 message type "camt.011"

A "camt.011" message is always acknowledged by the SIC IP service with a "camt.025" message.

3.2 Limit type

The following limit type is available for System Managers:

Limit type	Code value
IP emergency limit System Manager	IPSMEL

Table 3: System Manager limit type and its code in the "camt.011" message

To allow for correct, type-specific definition and validation, a corresponding code value is provided in the *ModfyLmt/LmtDtls/LmtId/Cur/Tp/Prtry* element for purposes of identification.

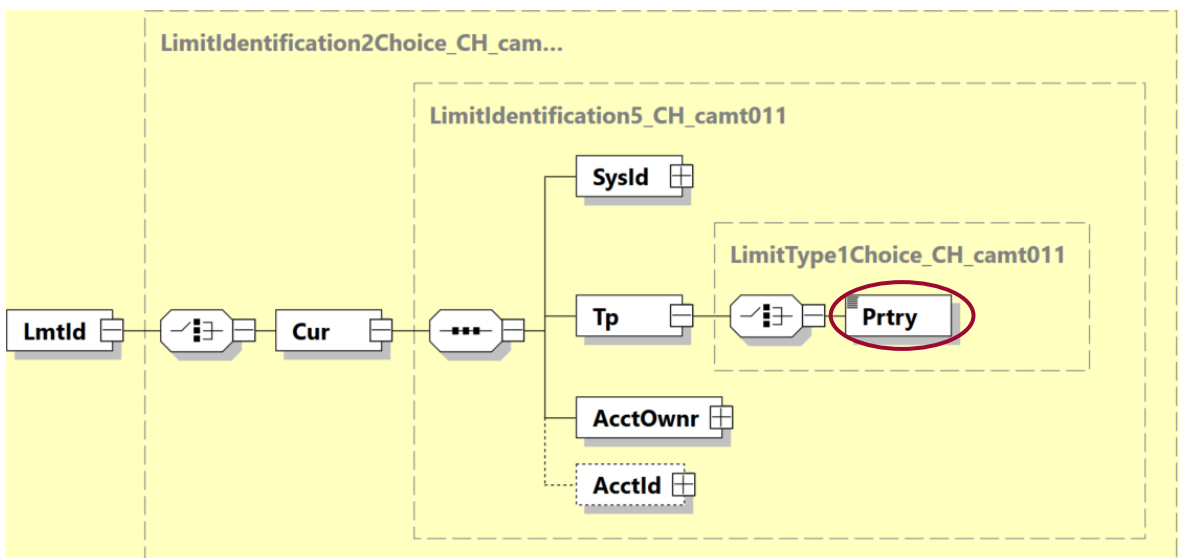

Figure 2: Entering the System Manager limit type in the "camt.011" message

3.3 Specifying the desired limit amount

In the "camt.011" message, the amount limit for the "IP emergency limit System Manager" is set with the `.../LmtDtls/NewLmtValSet/Amt/AmtWthCcy` element.

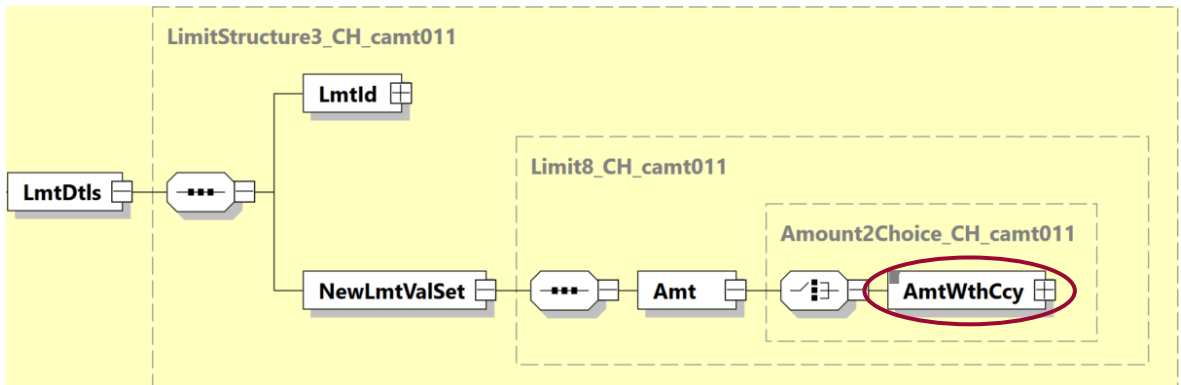

Figure 3: Specifying the amount limit

- Any possibly already existing amount limit will be overwritten by a newly specified amount.
- If an existing amount limit for "IP emergency limit System Manager" is to be deleted, then the amount value must be specified with the maximum value "9999999999999999" (18 digits, without decimal places).
- If the "IP emergency limit System Manager" is to be used to reject all IP customer payments, then the value must be set to "0" (zero).

3.4 References in the "Modify Limit" (camt.011) message

The `.../MsgHdr/MsgId` reference element is included in the A-level as the unique message identification of the "camt.011" message.

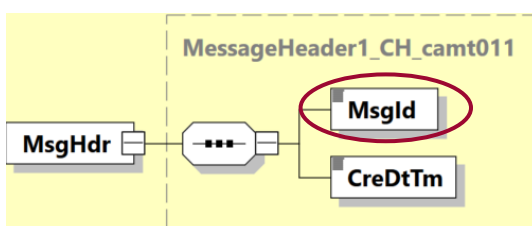

Figure 4: References in the "camt.011" message

3.5 Further business specifications

Further business specifications can be found in the base document.

4 Technical specifications

4.1 Message Header (MsgHdr, A-level)

The "Message Header" block (A-level of the message) occurs exactly once in the message and contains the following elements:

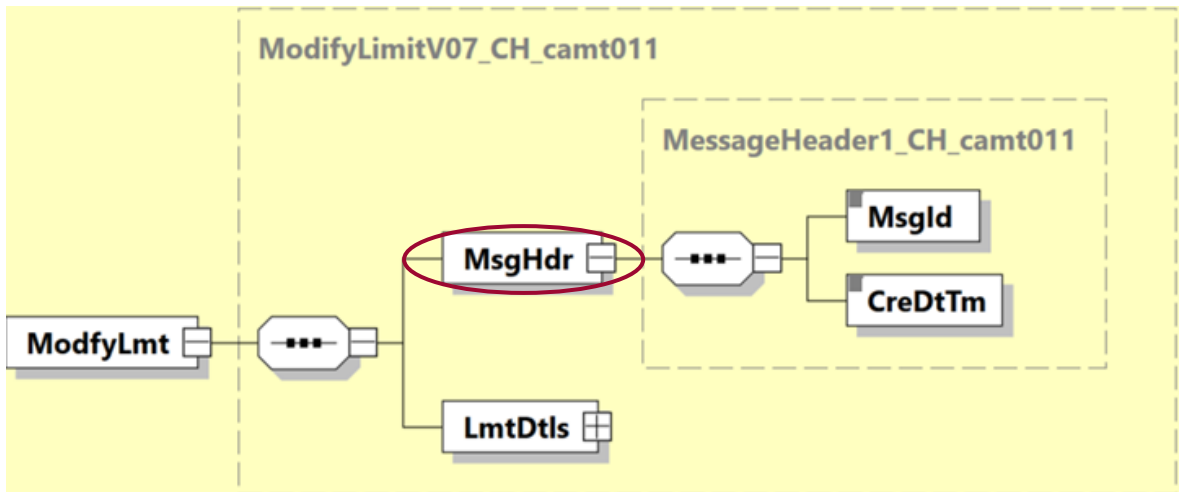

Figure 5: Message Header (MsgHdr)

The following table specifies all the elements of the "Message Header" block in the "camt.011" message that are relevant to the SIC IP service.

ISO 20022 Standard			Swiss ISO 20022 Payments Standard for Instant Payments	
Message Item	XML Tag	Mult	Mult	Definition
Document +Modify Limit V07	ModfyLmt	1..1	1..1	
Message Header	MsgHdr	1..1	1..1	
Message Header +Message Identification	MsgId	1..1	1..1	Message Identification Only the restricted character set excluding spaces is permitted for this element.
Message Header +Creation Date Time	CreDtTm	0..1	1..1	Creation Date Time See chapter "Times in all services (ISODateTime)" in the Implementation Guideline "Base Document".

Table 4: Message Header (MsgHdr, A-level)

4.2 Limit Details (LmtDtls, B-level)

The "Limit Details" block (B-level of the message) contains information to identify the System Manager, the limit type and the desired amount limit.

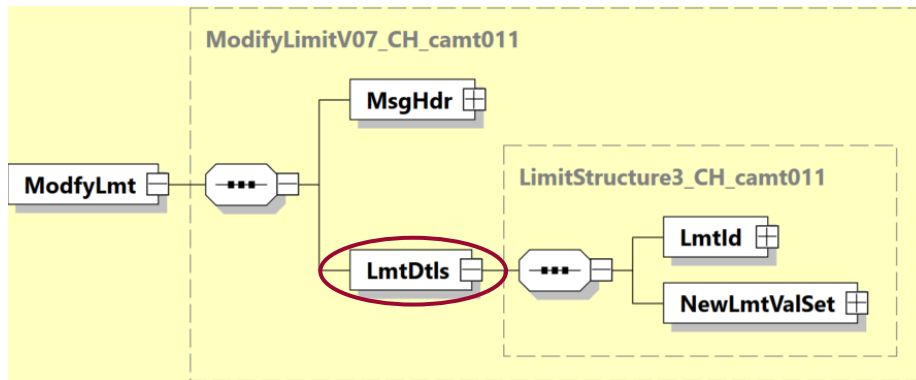

Figure 6: Limit Details (LmtDtls)

The following table specifies all the elements of the "Limit Details" block of the "camt.011" message that are relevant to the SIC IP service.

ISO 20022 Standard			Swiss ISO 20022 Payments Standard for Instant Payments
